

Verification Opinion Thomson Reuters Corporation CY2024 GHG Inventory

Background

Cameron-Cole, LLC (Cameron-Cole) was retained by Thomson Reuters Corporation (Thomson Reuters) to perform an independent verification of its Greenhouse Gas (GHG) Emissions Inventory (GHG Statement) for Calendar Year (CY) 2024. The Scope 1 and 2 GHG Inventory was developed according to the World Resources Institute (WRI)/World Business Council for Sustainable Development (WBCSD) Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004 revised edition) along with its associated amendments. The Scope 3 GHG Inventory was prepared using the WRI/WBCSD Corporate Value Chain (Scope 3) Accounting and Reporting Standard dated September 2011 and associated amendments. Our opinion on the results of the inventory, with respect to the verification objectives and criteria, is provided in this statement.

Responsibility of Thomson Reuters & Independence of Verification Provider

Thomson Reuters has sole responsibility for the content of its GHG Statement. Cameron-Cole accepts no responsibility for any changes that may have occurred to the GHG emissions results since they were submitted to us for review. Based on internationally accepted norms for impartiality, we believe our review represents an independent assessment of Thomson Reuters' CY2024 GHG Emissions Inventory. Finally, the opinion expressed in this verification statement should not be relied upon as the basis for any financial or investment decisions.

Level of Assurance

The level of assurance is used to determine the depth of detail that a Verification Body designs into the Verification Plan to determine if there are material errors, omissions, or misstatements in a company's GHG assertions. Two levels of assurance are generally recognized—reasonable and limited. Reasonable Assurance generates the highest level of confidence that an emissions report is materially correct (with the exception of Absolute Assurance which is generally impractical for companies to achieve). Limited Assurance provides less confidence and involves a less-detailed examination of GHG data and supporting documentation. Limited Assurance statements assert that there is no evidence that an emissions report is not materially correct. Cameron-Cole's verification of Thomson Reuters' GHG Emissions Inventory for CY2024 was constructed to provide a Limited Level of Assurance.

Objectives

The primary objectives of this verification assignment were as follows:

- Determine whether the CY2024 GHG emissions assertions meet/exceed the 95% threshold for accuracy for Scope 1, 2, and 3 emissions (assessed separately);
- Evaluate the conformance of Thomson Reuters' accounting and calculation methodologies, processes, and systems to the WRI/WBCSD GHG Protocol and WRI/WBCSD Corporate Value Chain (Scope 3) Accounting and Reporting Standard.

Verification Criteria

Cameron-Cole conducted verification activities in alignment with the principles of ISO-14064-3:2019(E) Specification with guidance for the verification and validation of greenhouse gas statements. The Thomson Reuters' GHG statement was prepared to, and verified against, the WRI/WBCSD GHG Protocol and WRI/WBCSD Corporate Value Chain (Scope 3) Accounting and Reporting Standard.

Verification Scope & GHG Statement

The scope of the verification covers Thomson Reuters' CY2024 GHG Emissions Inventory with the following boundaries:

- Geographical: Worldwide
- Chemical: Carbon Dioxide (CO₂), Methane (CH₄), Nitrous Oxide (N₂O), and Hydrofluorocarbons (HFCs)
- Organizational Boundary: Thomson Reuters is using the operational control approach for accounting, as defined in the GHG Protocol.
- Operational Boundary: The following sources/emissions were identified in CLIENT's organizational boundary:
 - Scope 1
 - Direct emissions from stationary combustion sources: combustion of natural gas in building boilers/furnaces, propane, and diesel for emergency generators.
 - Direct fugitive emissions: refrigerants
 - Scope 2
 - Indirect emissions from electricity purchases: consumption of electricity for office operations and data centers.

- Indirect emissions from purchased heat.
- Scope 3
 - Category 6: Business Travel
 - Category 7: Employee Commuting

Thomson Reuters' GHG assertions are as follows: In CY2024, Thomson Reuters reported 5,670.81 metric tons (MT) of carbon dioxide equivalents (CO₂e) from direct Scope 1 emission sources, 39,786.52 MT CO₂e from indirect Scope 2 location-based emission sources, 51,317.40 MT CO₂e from market-based emission sources, and 16,400.03 MT CO₂e from Scope 3 emission sources.

Verification Opinion

Based on the method employed and the results of our verification activities, Cameron-Cole has found no evidence of material errors, omissions, or misstatements in Thomson Reuters' CY2023 GHG Statement. Cameron-Cole also found that Thomson Reuters' GHG accounting and calculation methodologies, processes, and systems for this inventory conform to the WRI/WBCSD GHG Protocol and WRI/WBCSD Corporate Value Chain (Scope 3) Accounting and Reporting Standard.
